

CloudFiles, your dedicated online file storage and sharing solution

Your files are the basis of all your corporate data. Their confidentiality must be ensured and their storage location identified, while offering useful features and easy access.

Enjoy the cloud safely !

CloudFiles is an online file sharing and storage application that integrates accurate tracking of all activities and is easily installed on your usual webhost or on one of your internal or extranet corporate servers.

Rather than send your files by email, put them on your CloudFiles and share links with your collaborators and customers, you will be notified when downloading. Security, speed, no more worries about file size, download history.. 😊
