

Companies in high-risk environments face complex safety and compliance requirements. Passport 360 digitizes and automates processes across all contractor, visitor, employee and equipment touch points, providing transparency into each process and where and why timelags and bottlenecks are occurring

OPERATIONAL SAFETY: Coherent, integrated and operational safety procedures are critical throughout high-risk sites and projects. Embedding consistent and sustainable safety and compliance processes generates a safety culture within different divisions whilst creating visibility at all levels.

SUSTAINABILITY AND LOCALISATION: Local communities can support or destroy the success of high-risk sites and projects. Boost your procurement process within your existing supply chain by pre-qualifying, up-skilling and making use of local resources.

RETAIN ORGANISATIONAL AND COMPETENCY-BASED RISK KNOWLEDGE: Capture and retain knowledge gained on high-risk sites and projects by minimizing "CORPORATE AMNESIA". Passport 360 allows for historical safety and performance ratings to build over time generating unique insights on contractor / employee capabilities, further reducing costs and increasing utilization.

LACK OF VISIBILITY AND CONTROL OVER CONTRACTOR OPERATIONS

As the Service Provider upload / maintain their manpower / equipment budget and other details before the tender is awarded, visibility is created with regards to compliance already met and compliance outstanding. Selection is managed via AI driven digital evaluation ratings based on user-definable KPI's

REDUCE COMPLEXITIES AND INEFFICIENCIES

Provide visibility by tracking on-boarding process steps and the time taken within each step to reduce bottlenecks, improve process times, utilization and efficiencies

CONTRACTORS TERMINATED FOR SAFETY VIOLATIONS

One end-to-end integrated solution ensures that the termination of Contractors for poor safety records, performance issues or other user-definable non-compliance concerns are not awarded work across other sites / projects

MONITOR KEY REQUIREMENTS AND DOCUMENT VALIDITY

Monitor and audit SHE files and compliance documents with Cognitive Search, OCR and Natural Language processing that provides enhanced document search and predictive features. Configurable alerts can be sent out across various platforms

SEAMLESS INTEGRATION

API's are utilized that integrate with disparate internal systems in order to consolidate information and provide transparency whilst reducing bottlenecks, data duplication and data entry error. Passport 360 reduces silo's by overlaying the entire supply-chain process with a holistic view

WHAT OUR CUSTOMERS ARE SAYING

"Passport 360 gave us insights into risky contractor behavior that we were unable to see before" – **Ralph Christie, Section Engineer, Anglo American**
